(510) 541-8379 | Oakland, CA (94609) | luongdang0701@gmail.com | [linkedin.com/in/luong-dang](https://www.linkedin.com/in/luong-dang) | github.com/luongkhdang

About

Full-stack Software Engineer with 2+ years of experience building end-to-end systems that combine business logic, data analytics, and user-focused UX. Engineered ERP tools and automation pipelines that cut manual overhead by 40%, increased LTV by 15%, and improved telemetry observability. Proficient in production-grade stacks (React, Next.js, TypeScript, TailwindCSS, FastAPI, PostgreSQL, Docker). Skilled in API integration (REST/GraphQL, JWT), real-time data sync, and CI/CD tooling (Github Actions, Supabase). Thrive in Agile teams with strong collaboration, feedback-driven iteration, and full lifecycle ownership.

Technical Skills

- Languages & Frameworks:** Python, TypeScript, JavaScript, SQL, HTML, CSS, React.js, Next.js, Redux, TanStack Query
- Backend & DevOps:** Django, FastAPI, Node.js, PostgreSQL, Supabase, RESTful APIs, GraphQL, JWT, Docker, Kubernetes, Github Actions, Webpack, NPM scripts
- Systems & Architecture:** CI/CD, Microservices, ETL Pipelines, Component-Based Architecture, Design Systems, RAG, AI Tooling, PaaSaaS integration
- Testing, Monitoring & Performance:** Unit Testing, Integration Testing, Linting, Code Coverage, Datadog, Lighthouse, A11Y Standards, Lazy Loading, Bundle Optimization
- Product & Collaboration:** ERP Systems, CRM Automation, Agile/Scrum, JIRA, Internal Tooling, Ownership Mindset, Cross-Functional Collaboration, Mentorship

Experience

- Full-stack Developer / Operations Manager** Oct 2024 – Present, Jun 2021 - Jan 2022
Kim Tin Jewelry *Oakland, CA*
- Consolidated fragmented workflows into unified admin dashboards with real-time ETL, embedded analytics, and exportable reports-enabling strategic insights that directly supported a successful business exit.
 - Architected and deployed modular ERP systems (inventory, billing, CRM, analytics) using React.js, TypeScript, FastAPI, PostgreSQL, Docker-eliminating siloed processes and reducing manual workload by 40%.
 - Built AI-driven chatbots (ops + client-facing) and automated multichannel outreach pipelines (SMS/email) with NLP intent parsing-boosted per-order spend by 15% and added 10,000+ qualified leads.
 - Integrated GraphQL and RESTful APIs, implemented stateful front-end caching (Redux, TanStack Query), and optimized performance-minimized load times and improved UX across all business-facing tools.
 - Contributed to design system reuse and implemented WCAG-compliant UI standards-ensuring visual accessibility and consistency across modules.
 - Developed unit and integration tests using Jest, React Testing Library, and Pytest-ensuring coverage across front-end forms, back-end APIs, and ETL pipelines.
 - Deployed robust CI/CD workflows (GitHub Actions, Webpack, NPM scripts) and monitored KPIs with Datadog-ensured stable releases, reduced regressions, and increased deployment confidence.
 - Operated in Agile Scrum, managed JIRA sprint boards, ran QA test plans, and owned the entire software delivery lifecycle-ensuring consistent stakeholder alignment and measurable product velocity.
- Insurance Agent (Full-Cycle Sales Ops, CRM Systems Integration) - 2 years, 6 months** Apr 2022 – Sep 2024
AAA – The Auto Club of Southern California *Costa Mesa, CA*
- Managed the full sales lifecycle (lead gen, quoting, self-underwriting, servicing), personally generating \$1.2m+ ARR and ranking top 3% of 255 agents.
 - Acted as Salesforce CRM power user + rollout bridge, validating UAT flows, surfacing edge cases, and shaping feature requests' accelerated adoption across frontline teams.
 - Built VBA macros (Excel, Word, Outlook) to automate lead management, follow-ups, onboarding, and renewal workflows on script-restricted systems-cutting repetitive workload by 20%+.
 - Led macro adoption for a 21-member team and trained 100+ agents org-wide on CRM usage, dramatically improving pipeline hygiene, retention tracking, and conversion velocity.
 - Contributed directly to Team of the Year (Regional) by improving sales ops throughput, reducing manual errors, and scaling CRM usage across teams.

Education

- San Francisco State University** San Francisco, CA
Bachelor of Science in Computer Science *GPA: 3.64*
- Relevant Coursework**
- OOP, Algorithms, Software Design and Implementation, Database Structures, Full-Stack Web Development, Operating Systems, NLP.*

Projects

- News Scraper+Reader Ultimate** | *Python, Puppeteer, FastAPI, PostgreSQL, Docker, GeminiAPI, RAG, Haystack, NLP, ETL, LLM, REST* Mar 2025 – Present
- Architected a distributed ETL pipeline (24,500+ articles/day - scalable to 500k+) for multilingual news ingestion via headless Puppeteer, tokenized parsing, and schema-normalized persistence.
 - Integrated RAG stack with Gemini, Haystack, and FAISS-ready vector embeddings for semantic clustering, context-rich summarization, and historical grounding.
 - Designed token-budget-aware LLM throttling to optimize latency-bound throughput (1200 articles per 70 min) under API rate constraints.
 - Provisioned containerized FastAPI endpoints with REST architecture-enabled programmatic access by internal tools and external clients.
 - Future product integrates user profiles, behavioral analytics, and dynamic scrolling to deliver personalized newsfeeds based on historical reading patterns and AI clustering.
- House of Iris** | *Next.js, React.js, TypeScript, Supabase, PostgreSQL, TailwindCSS, Cloudinary CDN, EmailJS, FramerMotion* Dec 2024 – Present
- Developed a mobile-first SPA with dynamic routing, gacha-style interactivity, letter board posts, and a scheduler with email confirmations-designed for casual users seeking an immersive UX.
 - Used asset pipeline with Cloudinary + lazy-loading to deliver high-res media on mobile without frame drops-enhanced visual fidelity while controlling bandwidth.
 - Implemented full-stack CRUD via Supabase Postgres (Row-Level Security, JWT auth) and TanStack Query caching-ensured responsive UI state and secure client access.
 - Integrated user feedback via form tracking and behavioral metrics to improve feature placement, animation timing, and onboarding clarity.
 - Contributed to a shared design system with scalable components and adhered to WCAG-compliant styling-boosting accessibility across screen sizes and assistive tech.
